

# Polyclonal antibodies against human CEACAM1

The antibodies were raised in rabbits immunized with two different forms of highly pure recombinant CEACAM1 consisting of the first 1-4 domains (#102-PA100) and of the truncated N-terminal form (#102-PA102) of CEACAM1. Both antibodies recognize CEACAM1 but not CEACAM8. Cross reaction with CEACAM3, CEACAM4, CEACAM5, CEACAM6 und CEACAM7 are not tested so far.

The experiment was performed by Dr. Bernhard Singer, University Hospital Essen, Germany
