

Polyclonal antibody against Snake Venom VEGF-F (Bothrops Insularis)

Western Blot Analysis using a Protein-A purified antibody against svVEGF-F (Bothrops Insularis). Recombinant svVEGF-F produced in *E. coli* was used for immunization. The antibody detects the monomeric svVEGF-F but shows no cross reactivity with related proteins like mouse and human VEGF-A, VEGF-C and PIGF. A weaker band is visible at about 26 kDa which would correspond to the dimeric svVEGF-F.
